***Allowable Subject Matter***

Claims 1-22 are allowed.

The following is an examiner's statement of reasons for allowance: although the prior art of record discloses the user-defined features described below, the prior art of record does not disclose, teach, or suggest user-defined triggering logic described in a HDL, more particularly taking claim 1 as exemplary, a method comprising reading a file containing user-defined triggering logic used to detect one or more triggering events, the triggering logic described in a HDL, inserting and connecting the user-defined triggering logic to a circuit described in HDL, and compiling the HDL description of the circuit that includes the user-defined triggering logic.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Schubert et al. [U.S. Patent #6,581,191 B1] disclose user interaction with HDL descriptions to select trigger conditions [see, for example, column 18, lines 35-37, 40-42], however, the user does not define the triggering logic [see, for example, column 18, lines 44-46, 58-65]. Ahmad et al. [U.S. Patent Application Publication #2004/0250164 A1] disclose a programmable trigger generator that operates with user-defined instructions [see, for example, 0009 and 0037]. Ahmad et

al. [U.S. Patent #7,010,672 B2] disclose generating triggers in response to user-defined instructions.
